

U.S.SAWS™

U.S.SAWS Ductile Iron Bevelling

U.S.SAWS Ductile Iron Beveller allows the user to bevel while you cut. The bevelling process then follows with the grinding for the finish. The process eliminates the practice of using the side of an abrasive cut off blade.

This allows for a one man operation to bevel a pipe in or out of trench and is easily attached and removed from the saw. It is allowing the operator to bevel quickly, efficiently and safely.

Features:

- Bevel while you cut - then follow with grinding for finishing
- Eliminates practice of using side of abrasive cut off blade
- Cost effective when compared to cut-off blades
- One man operation
- Bevel pipe in or out of trench
- Is easily attached to and removed from saw

Ductile Iron and PVC Beveller installed on Chop Saw with Blade

Completed Bevel

Installed on Tiger Tooth™ Blade
(Blade sold separately)

Saw Make	Part Number	Arbor Size
Husqvarna	US24746	1"
Stihl	US24747	20 mm
