

U.S.SAWS™

CORDLESS CORE EZ CORE DRILLING

The U.S.SAWS Core EZ is a modular, high precision core drilling machine designed to drill holes in concrete faster and more accurately than traditional drill rigs or hand held devices. This machine excels in areas where portability is a key component to the job. Up on a scissor lift, down in a concrete vault, plumbers, mechanical contractors, fire sprinkler contractors and pro cutters will find this machine a faster, safer and easier way to drill holes in concrete. The system is mounted on a "Center Guide Post" to quickly and accurately guide the bit through the concrete. The center mount system eliminates the need to drill offset holes required to mount traditional rigs and also retains the core when drilling vertically. Please contact us to learn more of the benefits of the Center Guide Post drilling system. When transporting or not in use, the Core-EZ breaks down and fits neatly into a hard shell rolling storage case. The gearbox is made of solid billet aluminum and uses carbon fiber belts for strength and longevity.

Cordless Core EZ includes: Gearbox, 36v Battery Operated Metabo 36LTX Grinder, 2 Batteries, Battery Charger, and Wheeled Carrying Case

Features:

- Lightweight
- Easy and fast set-up and break-down
- No measuring off-sets
- Wont damage surfaces
- Unit holds the core once drilling is complete
- All equipment fits in one case
- Fits in tight spaces

Model	Cordless Core EZ
Part Number	US28005
Capacity	3" - 10" Core Bits (not included)
Electrical Requirements	6600 RPM
Motor	36v Battery Operated Metabo 36LTX Grinder
Dimensions	24" x 17" x 11"
Weight	50 lbs
