

5" HAND-HELD POLISHING PACKAGE

The 5" Metabo right angle polishing package has the latest technology for fast work and tool longevity. The rugged polyurethane dust shroud is a key feature of the polisher. It enables the polisher to be connected to a dust collection system for a more productive, comfortable work environment, requiring less cleanup. The dust shroud hose port is a standard 2" opening and features the "convertible" flip-up edge, allowing the operator to polish directly against a vertical surface.

A Metabo PE15-30 powers the polishing packages and include a dust shroud and backing pad.

Features:

- Hand-held units that are great for smaller jobs or in combination with walk-behind grinders on larger projects
- Ideal for polishing counter tops, in tight areas, or along walls where larger units can't get to
- May be connected to a variety of dust collection systems for dust containment
- The polyurethane dust shroud is long lasting and has an edge that can be flipped for edge work along vertical surfaces
- System includes electric grinder, dust shroud, and backing pad
