

ULTRA VAC 1250 - GAS

The Ultra-Vac 1250-G is a heavy-duty vacuum designed for collecting concrete dust where a gas-powered engine is most convenient. The 1250-G is the preferred vacuum system for the JS-131 & JS-160P Joint Clean-out Saw, the CC-100 Crack Chaser, and various Early Entry Saws. The wide, flat wheels make it a good choice for early entry control joint cutting, as they will lessen the possibility of indentations in the slab. This machine is constructed of an all-steel tube frame with a polyethylene body for years of use and abuse.

The large 12 pleat poly felt filter allows continued airflow even when the 12.5-gallon dust bin is near capacity—Complies with OSHA Table 1 regulations.

Features:

- Equipped with a Honda GX gas engine and a large CFM blower for use with our bigger saws that require more air-flow
- Works with masonry and block saws where gas-powered equipment is necessary
- Equipped with front & rear handles for easy transportation
- The option for propane power is also available
