

VALVE EXERCISER - TREATMENT PLANT APPLICATION

The U.S.SAWS Plant Maintenance Kit is a compact, battery-powered solution specifically engineered for water reclamation plants. This powerful unit eliminates the need for labor-intensive manual hand cranking, streamlining operations and reducing operator fatigue.

Its one-piece leg design, complete with an attached stabilizing handle and adjustable leg, provides enhanced control and ease of use. By minimizing manual effort, it saves both time and energy, while also significantly reducing the risk of job-related injuries

Package Includes: Powerhead, Batteries, Charger, Storage Box, Horizontal Leg, Modified Handle

Features:

- One-piece leg design with attached stabilizing handle and adjusting leg piece
- Saves time and energy by taking away from manual hand cranking
- Significantly decreases the probability of on the job injuries
