

U.S.SAWS Bevelling Equipment

U.S.SAWS offers a line of bevelling attachments that allow the user to bevel or bevel while you cut. We have designed the unit to eliminate the practice of using the side of an abrasive cut off blade. Making this a cost-effective method when compared to cut-off blades. The attachment is easy to install and use; once attached, the user can efficiently bevel plastic pipe in or out of the trench. We also offer a variety of models depending on the application and make of the saw.

U.S.SAWS bevelling attachments allow for the operator to bevel quickly, safely and efficiently.

Features for PVC Pipe Bevelling

- Easy to install and easy to use, it is simply the easiest way to bevel plastic pipe
- Inexpensive solution to bevelling plastic pipe - in or out of the trench
- Can be attached or removed easily without disturbing the blade
- Models available to fit construction saws and 5/8-11 threaded grinders
- Models vary depending on the application and make of saw
