

U.S.SAWS™

HYDRANT PACKAGE

The Hydrant Package is designed to open and close valves when flow testing, flushing work, and inspections are needed to be done on valves. The Hydrant Package reduces the labor intensity that comes with the opening and closing operation. Valves can be stiff and difficult to open, and our process allows for a safe and efficient process.

Package Includes: Powerhead with hard case, batteries, hydrant key, and modified handle

Features:

- Designed to simplify the opening and closing of valves during flow testing, flushing, and inspections.
- Reduces the physical effort required to operate stiff or hard-to-turn valves.
- Promotes safer valve operation by minimizing strain and manual handling.
- Includes a powerhead with a hard case for easy transport and protection.
- Comes with batteries for convenient, cordless operation.
- Equipped with a hydrant key for quick and easy access.
- Features a specially modified handle for improved grip and maneuverability.
